

Hatch : The First, Most Advanced IT Lifecycle Management Tool

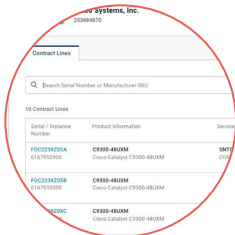

AHEAD's genetic code of speed, impact, innovation, and automation allows for the creation of a seamless experience for our clients. This seamless, AHEAD experience is demonstrated in our proprietary Hatch™ software, which streamlines infrastructure and asset management across your network, from the data center to the edge. Hatch consolidates all of your data into a single interface that works with your existing toolset, not against it, enabling your team to accelerate your digital ambitions.

Multi-Site Management

Change Control

Contract Management

Integrations and Interoperability

The abilities of Hatch are incomparable when it comes to managing your IT network. One valuable application of Hatch can be seen in its integrations and interoperability. Your team can use the fully documented REST and GraphQL API for ERP integration, embed individual Hatch pages into third-party applications, and pull live data into Excel. This means everything is always up to date for every team member to view, collaborate, and manage.

The AHEAD Data Layer for IT Deployment & Lifecycle Truth

Hatch is your easiest entry point into what we call the AHEAD data layer, which sits at the very fabric of AHEAD. Our goal isn't to displace your existing toolsets, but instead to augment and enrich them.

Accelerate Your Team's Impact

A Digital Platform for Your Modern Enterprise

Hatch Empowers Your Team to:

Rein in the chaos of the edge

Unlock unparalleled levels of
supply chain transparency

Improve the accuracy of
and enrich your CMDB

Better coordinate
complex rollouts

Stay ahead of support renewals
and asset lifecycle status

Who May be Interested?

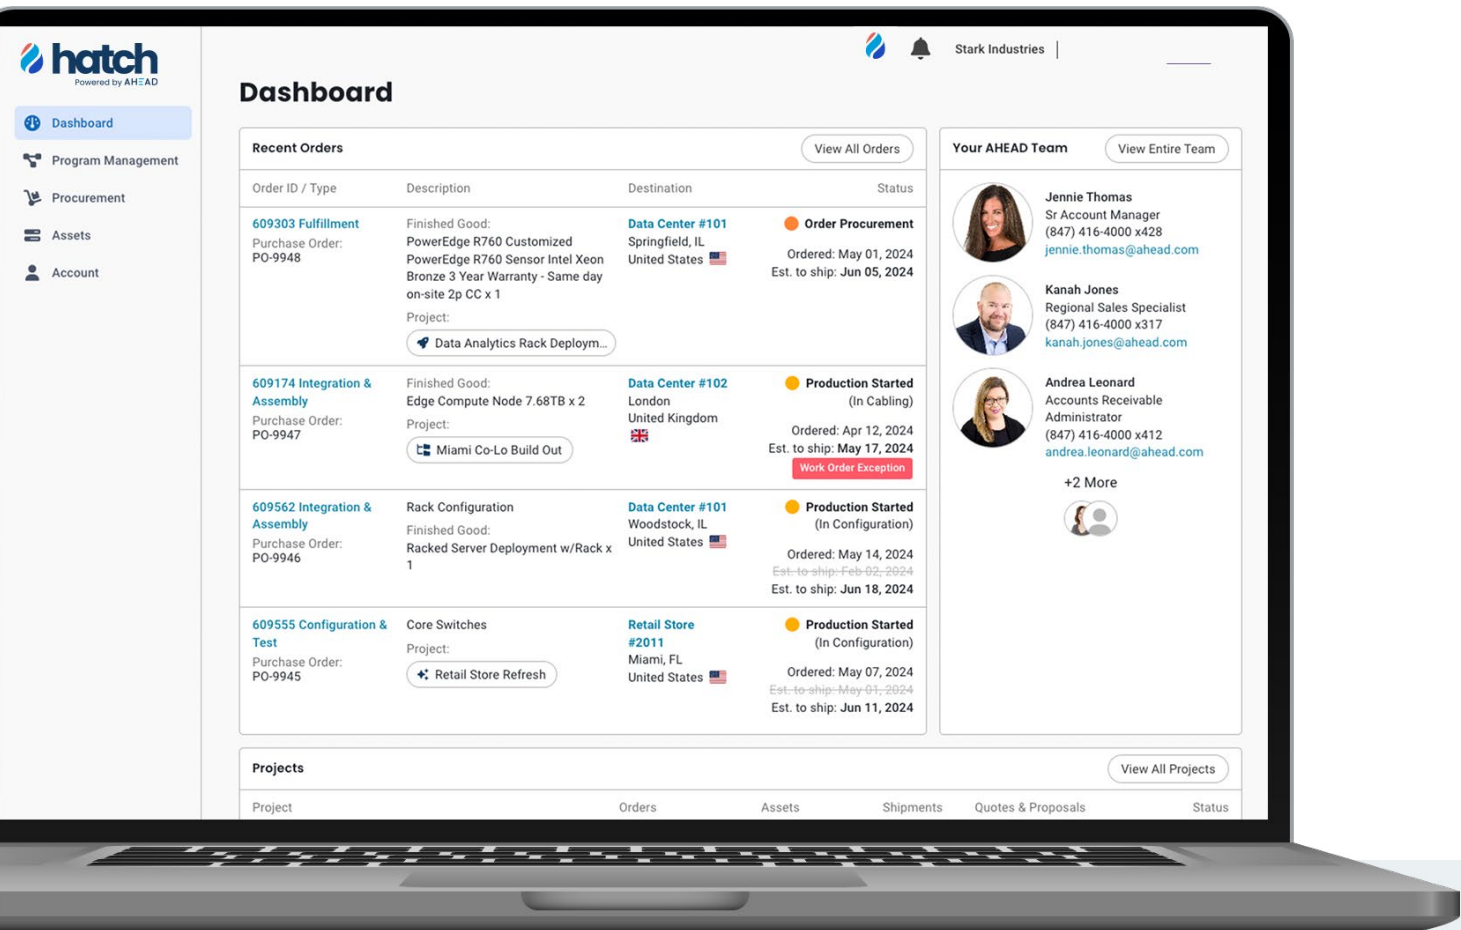

Your IT Team can use Hatch as a lifeline for planning, executing, and managing IT/OT infrastructure at scale.

Your Engineering Team can manage product lifecycles to stay ahead of change orders and gain visibility into networking lifecycle needs.

Your Supply Chain Team can gain visibility to component origin, order status, and inventory levels at a speed never experienced before.

Your Logistics Team can improve efficiency throughout the order to-delivery process to bring pinpoint accuracy to site installation scheduling.
